Longing for a kinder, gentler world? As the old saying goes, everything begins at home, and odds are, if you live in the all-American household, the air inside is more toxic than the air outside, even if you live in the most polluted of cities. You regularly handle the filthiest object in your home -- the kitchen sponge -- and put the same chemicals on your face that are used in brake fluid and antifreeze. The cleaning agents and personal care products commonly marketed to and used in American homes contain not only some very dangerous, toxic chemicals, but they also create an "overly clean," chemically bombed-out house that compromises immune systems. And with more than fifty million Americans suffering from allergies and other autoimmune diseases -- not to mention the developing and fragile immune systems of children and seniors -- large numbers of people

are actually being made sicker and sicker by their homes. Learn to live a clean, healthy, more economical way with Ellen Sandbeck, the nontoxic avenger. In this must-have book for the twenty-first-century home, this passionate, witty advocate of all things organic will teach you how to maintain every part of the home -- from living room to septic tank, kitchen floor to bathroom sink -- using safe, simple cleansers and quick preventative measures as well as the most effective organic products on the market to get the job done. Learn time-saving, preventative housekeeping, such as taking thirty seconds to clean the shower while you shower. Take care of bathroom stains with baking soda and vinegar rather than commercial, toxic bathroom "bombs" peddled to you with such force by manufacturers. Need whiter whites? There is no bleaching power on earth stronger than the sun. Snow clean your fine rugs. Choose fruits and vegetables from the relatively pesticide residue-free list. Clean felt-tipped pen stains with vodka. Make furniture shine with olive oil and lemon. Your house will also smell as great as it looks. Over 8,300 pages ... Electroplating is an electro deposition process for producing a dense, uniform, and

adherent coating, usually of metal or alloys, upon a surface by the act of electric current. The term is also used for electrical oxidation of anions onto a solid substrate, as in the formation silver chloride on silver wire to make silver/silver-chloride electrodes. Electroplating is primarily used to change the surface properties of an object (e.g. abrasion and wear resistance, corrosion protection, lubricity, aesthetic qualities, etc.), but may also be used to build up thickness on undersized parts or to form objects by electroforming. Electrochemical deposition is generally used for the growth of metals and conducting metal oxides because of the following advantages: (i) the thickness and morphology of the nanostructure can be precisely controlled by adjusting the electrochemical parameters, (ii) relatively uniform and compact deposits can be synthesized in template-based structures, (iii) higher deposition rates are obtained, and (iv) the equipment is inexpensive due to the non-requirements of either a high vacuum or a high reaction temperature. An electrochemical process where metal ions are transferred from a solution and are deposited as a thin layer onto surface of a cathode. In the recent years, developments in electronic and chemical engineering have extended the process of electroplating to a wide range of materials such as platinum, Alloy, Silver, Palladium, Rhodium, etc. The electroplating market is an application driven market, which depends largely on the net output of the manufacturing industry. The electroplating technology allows electro-deposition of multiple layers as thin as one-millionth of a centimeter which makes it an indispensable part of the semiconductor industry. Rising demand for computing devices is expected to create significant market opportunities for electroplating service providers. Growing net output of manufacturing industry, rising demand for consumer goods which mandates more surface finishing services, growth of the electronics industry are some of the key factors driving the growth of the global electroplating market. The book gives comprehensive coverage of Electroplating Uses, Application Manufacturing, Formulation and Photographs of Plant & Machinery with Supplier's Contact Details. The major contents of the book are

Metal Surface Treatments, Electrolytic Machinery Methods, Electroless Plating, Electroplating Plant, Electroplating of Aluminium, Cadmium, Chromium, Cobalt, Copper, Gold, Iron, Lead, Nickel, Bright Nickel, Silver, Alloy, Platinum, Palladium, Rhodium, Bright Zinc, Tin and Plastics Barrel, Zinc Electroplating Brightener, Colouring of Metals, Metal Treatments, Electrode position of Precious Metals and Stainless Steel, Case Hardening, Electroless Coating of Gold, Silver, Manufacture of phosphorus. It is a very useful book that covers all important topics of Electroplating. It will be also a standard reference book for professionals, entrepreneurs, those who are interested in this field can find the complete of Electroplating. It will be very helpful to consultants, new entrepreneurs, technocrats, research scholars, libraries and existing units. Supplement to 3d ed. called Selected characteristics of occupations (physical demands, working conditions, training time) issued by Bureau of Employment Security. This book addresses corrosion problems and their solutions at facilities in the oil refining and petrochemical industry, including cooling water and boiler feed water units. Further, it describes and analyzes corrosion control actions, corrosion monitoring, and corrosion management. Corrosion problems are a perennial issue in the oil refining and petrochemical industry, as they lead to a deterioration of the functional properties of metallic equipment and harm the environment – both of which need to be protected for the sake of current and future generations. Accordingly, this book examines and analyzes typical and atypical corrosion failure cases and their prevention at refineries and petrochemical facilities, including problems with: pipelines, tanks, furnaces, distillation columns, absorbers, heat exchangers, and pumps. In addition, it describes naphthenic acid corrosion, stress corrosion cracking, hydrogen damages, sulfidic corrosion, microbiologically induced corrosion, erosion-corrosion, and corrosion fatigue occurring at refinery units. At last, fouling, corrosion and cleaning are discussed in this book.
