producing what a 2.0 was a few years ago 10 apr 2020 and of course the John Cooper Works version which is what I think you're actually referring to since the standard Mini Cooper S has 170hp, GM has a 180hp turbo 1.6 but that's a little way off, VW's Mk5 Golf has a 1.4 twincharged engine 168hp supercharged and turbocharged which is about the same as a 190hp 1.6. After that, I'm not sure. The Otto cycle engine works on 4 different processes: 1 suction where air/fuel is sucked in the engine cylinder, 2 compression where the sucked-in mixture is compressed, 3 power expansion where the compressed mixture is ignited, blast happens and the piston moves down rotating the crankshaft. The Ford 1.6L EcoBoost engine is a turbocharged four-cylinder engine from Ford Motor used to power subcompact, compact and midsize cars and utility vehicles, or more commonly known as crossovers, featuring a dual overhead cam (DOHC) design in an inline configuration. The Ford 1.6L EcoBoost engine is heavily related to the Ford 1.6L. The number for the engine, whether something like 427 cubic inches or 5.0L, is the displacement or total volume of all the cylinders. When an engine is a 5.6L V8, it means that every cylinder has a volume of 5.600 / 8 = 0.700L or 700ml per cylinder, about the size of your average soda bottle. In America, the engine-wise there's a choice of two 115hp powerplants: either the 1.6L I4 normally aspirated petrol unit we tried or the 1.5L I4 Blue Diesel turbo diesel. Either way, 4WD is an option if you want it, though most buyers will probably stick to the Ford Focus 1.6.
