Global Yield Curve Dynamics and Interactions Nov 29 2020 The popular Nelson-Siegel (1987) yield curve is routinely fit to cross sections of intra-country bond yields, and Diebold and Li (2006) have recently proposed a dynamized version. In this paper we extend Diebold-Li to a global context, modeling a potentially large set of country yield curves in a framework that allows for both global and country-specific factors. In an empirical analysis of term structures of government bond yields for the Germany, Japan, the U.K. and the U.S., we find that global yield factors do

indeed exist and are economically important, generally explaining significant fractions of country yield curve dynamics, with interesting differences across countries.

International Equity Exchange-Traded Funds _____ Oct 09 2021 This book presents the economic foundation of international equity investments providing a practical guide to invest in international equity exchange-traded funds (ETFs). It shows how to gain exposure to foreign stock markets through both theoretical foundations of international diversification and in-depth characteristics of global, regional, country-specific, and international sector/thematic ETFs. Unlike other books in the field which broadly discuss different aspects of the ETF market, this book explores one specific market segment, offering the first in-depth and state-of-the-art analysis of international equity ETFs and including, in particular, ETFs with global, regional, single-country, and international sector/thematic exposures. The number and variety of such financial instruments are constantly growing. Hence, it seems obvious that there is an urgent need for a book that will help investors who are willing to diversify their portfolios outside the domestic market—in both developed and emerging/frontier markets. International Equity Exchange-Traded Funds presents a comprehensive review of investment possibilities offered by international ETFs for stock market investors.
