The National Institute of Justice is the focal point for providing support to State and local law enforcement agencies in the development of counterterrorism technology and standards, including technological needs for chemical and biological defense. In recognizing the needs of State and local emergency first responders, the Office of Law Enforcement Standards (OLEs) at the National Institute of Standards and Technology (NIST), supported by the National Institute of Justice (NIJ), the Technical Support Working Group (TSWG), the U.S. Army Soldier and Biological Chemical Command, and the Interagency Board for Equipment Standardization and Interoperability (IAB), is developing chemical and biological defense equipment guides. These guides will focus on chemical and biological equipment in areas of detection, personal protection, decontamination, and communication. This guide focuses specifically on communication equipment and was developed to assist the emergency first responder community in the evaluation and purchase of communication equipment that can be used in conjunction with chemical and biological protective clothing and respiratory equipment. The long range plans include these goals: (1) subject existing communication equipment to laboratory testing and evaluation against a specified protocol, and (2) conduct research leading to the development of a series of documents, including national standards, user guides, and technical reports. It is anticipated that the testing, evaluation, and research processes will take several years to complete; therefore, the National Institute of Justice has developed this initial guide for the emergency first responder community to facilitate their evaluation and purchase of communication equipment. Workbook exercises will help you digest the content, reflect on your situation, learn from that reflection, and incrementally create a personalized recovery plan. Each exercise in the workbook walks you through a process of self-reflection and self-discovery to help you understand and make sense of your situation. First Responder Careers Expose Individuals to Higher Risks of Developing Trauma Some careers include a higher likelihood of experiencing traumatic events that can lead to the development of PTSD. Serving in the military is a high-risk factor for developing PTSD. However, combat veterans develop PTSD at different rates depending on the severity and length of exposure to traumatic experiences. There are also high incidences of reported sexual harassment and sexual abuse in the military. As a result, the rates of PTSD are relatively high compared to the overall prevalence in the general population. Not only can law enforcement officers experience direct threats and stressful conditions, but they also regularly witness the devastating effects of assaults, robberies, kidnappings, and violent events. However, individuals in this profession have lower-than-expected rates of PTSD, surprisingly. An estimated 20 percent overall may result from having access to counseling and rigorous pre-employment screenings. EMTs and paramedics are routinely exposed to life-threatening incidents and have more health problems than individuals in other occupations. PTSD rates in this group are as high as 20 percent. PTSD prevalence in this profession is comparable to law enforcement. Firefighters conduct paramedic activities and are the first responders to natural disasters. Firefighting is a dangerous profession that exposes workers to stressful conditions and traumatic events, ranging from threats to their safety and experiencing the devastating effects of catastrophes. As a result, the prevalence of PTSD in this group can be as high as 20 percent. Volunteer firefighters may have even higher rates because they don’t have access to the same level of support as career firefighters. Healthcare workers, especially those working in emergency rooms and intensive care units, are also at higher risk. For example, nurses working in critical care units are more likely to develop PTSD than nurses in other groups. In addition, while senior-level nurses report fewer PTSD symptoms than junior ones, they report higher rates of burnout. Finally, healthcare workers exposed to patients that have experienced violence, such as an assault victim, are more likely to develop PTSD than surgeons who treat assault victims. Rescue workers, medical workers, and volunteers who act as first responders during disasters witness the aftermath of horrific events and can even become involved in severe traumatic events. The prevalence of PTSD in these individuals has been estimated to be between 15 and 30 percent. Journalists who work as war correspondents are at higher risk of being injured, killed, or kidnapped. Their lifetime prevalence of PTSD, which can be as high as 30 percent, reflects their lack of access to support and PTSD treatment options. Transit and train operators are frequently exposed to physical threats and witness suicide incidents such as “person under train” events. Exposure to these traumatic and threatening circumstances can be a daily or weekly occurrence. Bus drivers are more prone to PTSD because they have more direct contact with the general public than train drivers locked in secure train cabs. In these high-risk professions, the incidence of trauma declines when policies are in place to debrief victims, give victims immediate access to counseling, and screen for individuals at high risk of having adverse reactions to traumatic conditions. First Responder Care Essentials is the ideal resource for Community First Responders. Grounded in practice and covering the full remit of the CFR role, the book takes you through the skills that you need when working with patients. Topics range from communication skills to manual handling, trauma care and cardiac arrest. Another one of Tom Martin's Crime Scene Forensics Handbooks - Accident Investigation Edition. First Responder's Guide to Agricultural Chemical Accidents provides emergency safety and health information for 452 toxic and hazardous products. In the event of a crisis, today more than ever, first-responder public information officers (PIOs) including police, fire, EMS, hospitals and other agencies on the front lines, must be prepared to communicate immediately. When time is of the essence, telling people what they need to know will help an agency come through a crisis with the trust and confidence of a community intact. Developing messaging in the midst of chaos can be fraught with problems. The answer is to create a strategic crisis communications plan in advance to serve as the backbone of your messaging. Preparing for potential issues in advance allows organizations to deal with incidents proactively, and effectively manage the narrative being conveyed by the media and other stakeholders. It also allows an agency to make important communications decisions quickly and decisively, as opposed to agonizing and wasting valuable time and resources debating what to say in the moment. This second edition guide provides simple and effective strategies along with templates to help first-response agencies create a bespoke crisis communications manual to allow it to be not only a first-responder, but a "first-reporter" as well. Why is digital and electronic evidence important to a first responder? There is information generated in the process of using mobile phones or computers which is stored in these devices that is of potential evidentiary value. This information and the devices in which it is stored are fragile and hence, the first responder needs to understand the process of collecting, preserving and submitting it for forensic examination. This Guide is intended to assist frontline wildlife law enforcers upon whom the responsibility of preserving a crime scene and collecting evidence may fall, if there is no investigator available. The guide addresses the handling of digital and electronic evidence in hopes that the first responders will be able to collect and preserve this very important form of evidence for successful wildlife crime investigations and prosecutions.
